

CITY OF HALLANDALE BEACH, FLORIDA
MEMORANDUM

DATE: March 03, 2017

TO: Roger M. Carlton, City Manager

FROM: Mark Ellis, Fire Chief
Dwayne S. Flournoy, Chief of Police

SUBJECT: Fire & Police MOU

The construction of the new Main Fire Station continues to move forward and completion is expected on July 31, 2017. Last year the City Commission requested the Police Department to provide information about Public Safety Monitoring and the implementation of an advanced Public Safety Monitoring program. The report provided by the Police Department outlined plans to replace old cameras and enhance the current surveillance platform to include active monitoring.

With the request for active monitoring, the Police Chief introduced the concept of a Physical Security Information Management system (PSIM), which integrates all security systems analytics and places them on one platform. During the final planning stages of construction for the new Main Fire Station, space for the PSIM was carved out of the Emergency Operations Center (EOC) at the New Main Fire Station. No infrastructural requirements were specified at the time the space was carved out because the space was a theoretical concept at that time.

Currently, as we proceed under an accelerated construction timeline, we have been conducting an extensive evaluation and assessment of the space requirements for the Emergency Operations Center/Training and PSIM rooms. Staff collectively determined the previously designated area for the PSIM is inadequate and not suitable for a fully functional PSIM. The size of the space, large windows, limited wall space, and adjacency to the training room could potentially hamper the buildout and functionality of the PSIM.

Staff is recommending an alternate location for the PSIM, which would accommodate all the needs and requirements for a fully functional PSIM. If approved, the space for the PSIM will be located on the northwest side of the building. This space would be larger than the previously designated area, provide complete privacy, have ample wall space, and limited windows. An additional benefit is the potential to maximize the new location as a police sub-station.

INTERLOGIC INC., the integrator and designer of the PSIM is currently reviewing the new plans with consideration of the PSIM being located in the newly proposed area. They are willing to provide a written proposal addressing these areas: cost; architectural; furniture; line of sight drawings; and 3D renderings. They will also include data, power, network, cooling, and lighting requirements.

Office of Capital Improvements staff has given a conservative estimate of \$400,000 to complete the PSIM in the newly proposed location. The Police Department has identified potential funding already budgeted within project PDPS1 to accommodate the newly proposed location of the PSIM

and equip the facility. However, the true cost is unknown until the construction documents are completed.

The Fire and Police Chiefs collectively are in agreement with the recommended requested change regarding the space allocation for the PSIM. Staff will work together with all parties to expedite this project.
