Re: Bluesten Park, Hallandale Beach, Florida – Traffic Impact Study

Dear Donald:

Traf Tech Engineering, Inc. is pleased to provide you with the results of the Traffic Impact Study undertaken for the proposed Bluesten planned to be located on the east side of SE 1st Avenue between SE 5th Street on the north and SE 7th Street on the south in the City of Hallandale Beach in Broward County, Florida.

It has been a pleasure working with Acai Associates, Inc., on this project.

Sincerely,

TRAF TECH ENGINEERING, INC.

Joaquin E. Vargas, P.E.
Senior Transportation Engineer

INTRODUCTION

The redevelopment of Bluesten Park will consist of a city park and a recreational community center. The park is located on the east side of SE 1st Avenue between SE 5th Street on the north and SE 7th Street on the south in the City of Hallandale Beach in Broward County, Florida. The location of the project site is illustrated in Figure 1 on the following page.

Traf Tech Engineering, Inc. was retained by Acai Associates, Inc., to conduct a traffic study in connection with the proposed redevelopment of the Bluesten Park. The study addresses trip generation and the traffic impacts created by the proposed project on the nearby transportation network. This study is divided into seven (7) sections, as listed below:

1. Inventory
2. Existing Conditions
3. Traffic Counts
4. Trip Generation
5. Trip Distribution and Traffic Assignment
6. Capacity Evaluation
7. Conclusions

ENGINEERING, INC.

PROJECT LOCATION MAP

FIGURE 1
Bluesten Park
Hallandale Beach, Florida

INVENTORY

Existing Land Use

The existing site has a park

Proposed Land Use and Access

The Bluesten Park site will be re-developed with the following land uses and intensities:

- City Park of 17.2 Acres
- Community Center of 46,716 Square feet

Access to the site will be provided via a driveway off of SE 1st Avenue and a driveway off of SE 7th Street. Appendix A contains a copy of the proposed site plan for the Bluesten Park.

EXISTING CONDITIONS

This section addresses the existing roadway system located in the vicinity of the project site and nearby intersections.

Roadway System

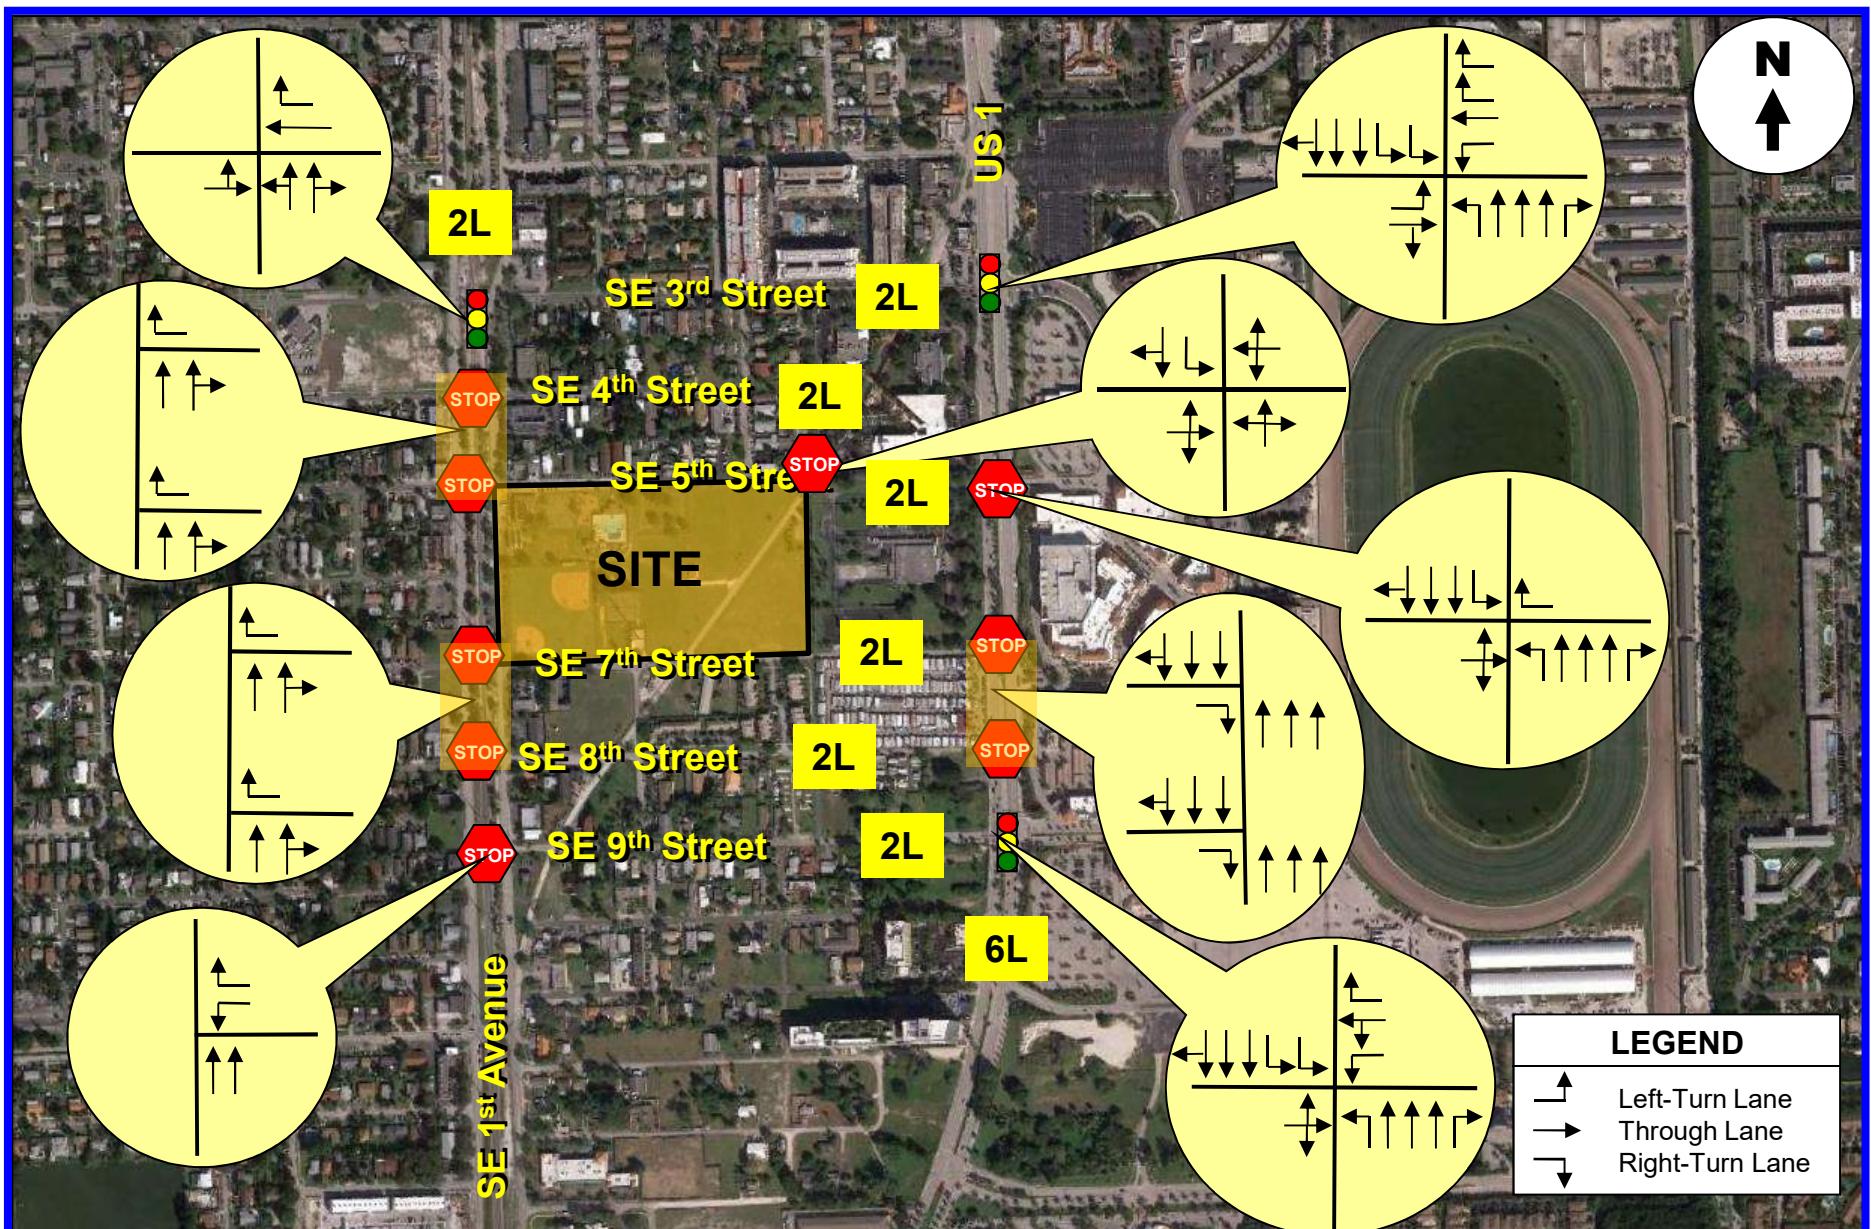

The roadway system located near the project site includes US 1/S. Federal Highway, SE 1st Avenue, SE 3rd Street, SE 4th Street, SE 5th Street, SE 7th Street, SE 8th Street and SE 9th Street. In the Vicinity of the project site, US/s. Federal Highway is a north-south arterial with three through lane in each direction. SE 1st Avenue is a one-way facility in the northbound direction with two through lanes. SE 3rd Street, SE 4th Street, SE 5th Street, SE 7th Street, SE 8th Street, and SE 9th Street are all east-west local streets with one through lane in each direction.

Nearby Intersections

The Bluesten Park is surrounded by the following intersections:

1. US 1 and SE 3rd Street (Signalized)
2. US 1 and SE 5th Street (Stop controlled)
3. US 1 and SE 7th Street (Stop controlled)
4. US 1 and SE 8th Street (Stop controlled)
5. US 1 and SE 9th Street (Signalized)
6. SE 1st Avenue and SE 3rd Street (Signalized)
7. SE 1st Avenue and SE 4th Street (Stop controlled)
8. SE 1st Avenue and SE 5th Street (Stop controlled)
9. SE 1st Avenue and SE 7th Street (Stop controlled)
10. SE 1st Avenue and SE 8th Street (Stop controlled)
11. SE 1st Avenue and SE 9th Street (Stop controlled)
12. SE 4th Avenue and SE 5th Street (Stop controlled)

Figure 2 shows the existing lane geometry of the intersections surrounding the project site.

TRAFFIC COUNTS

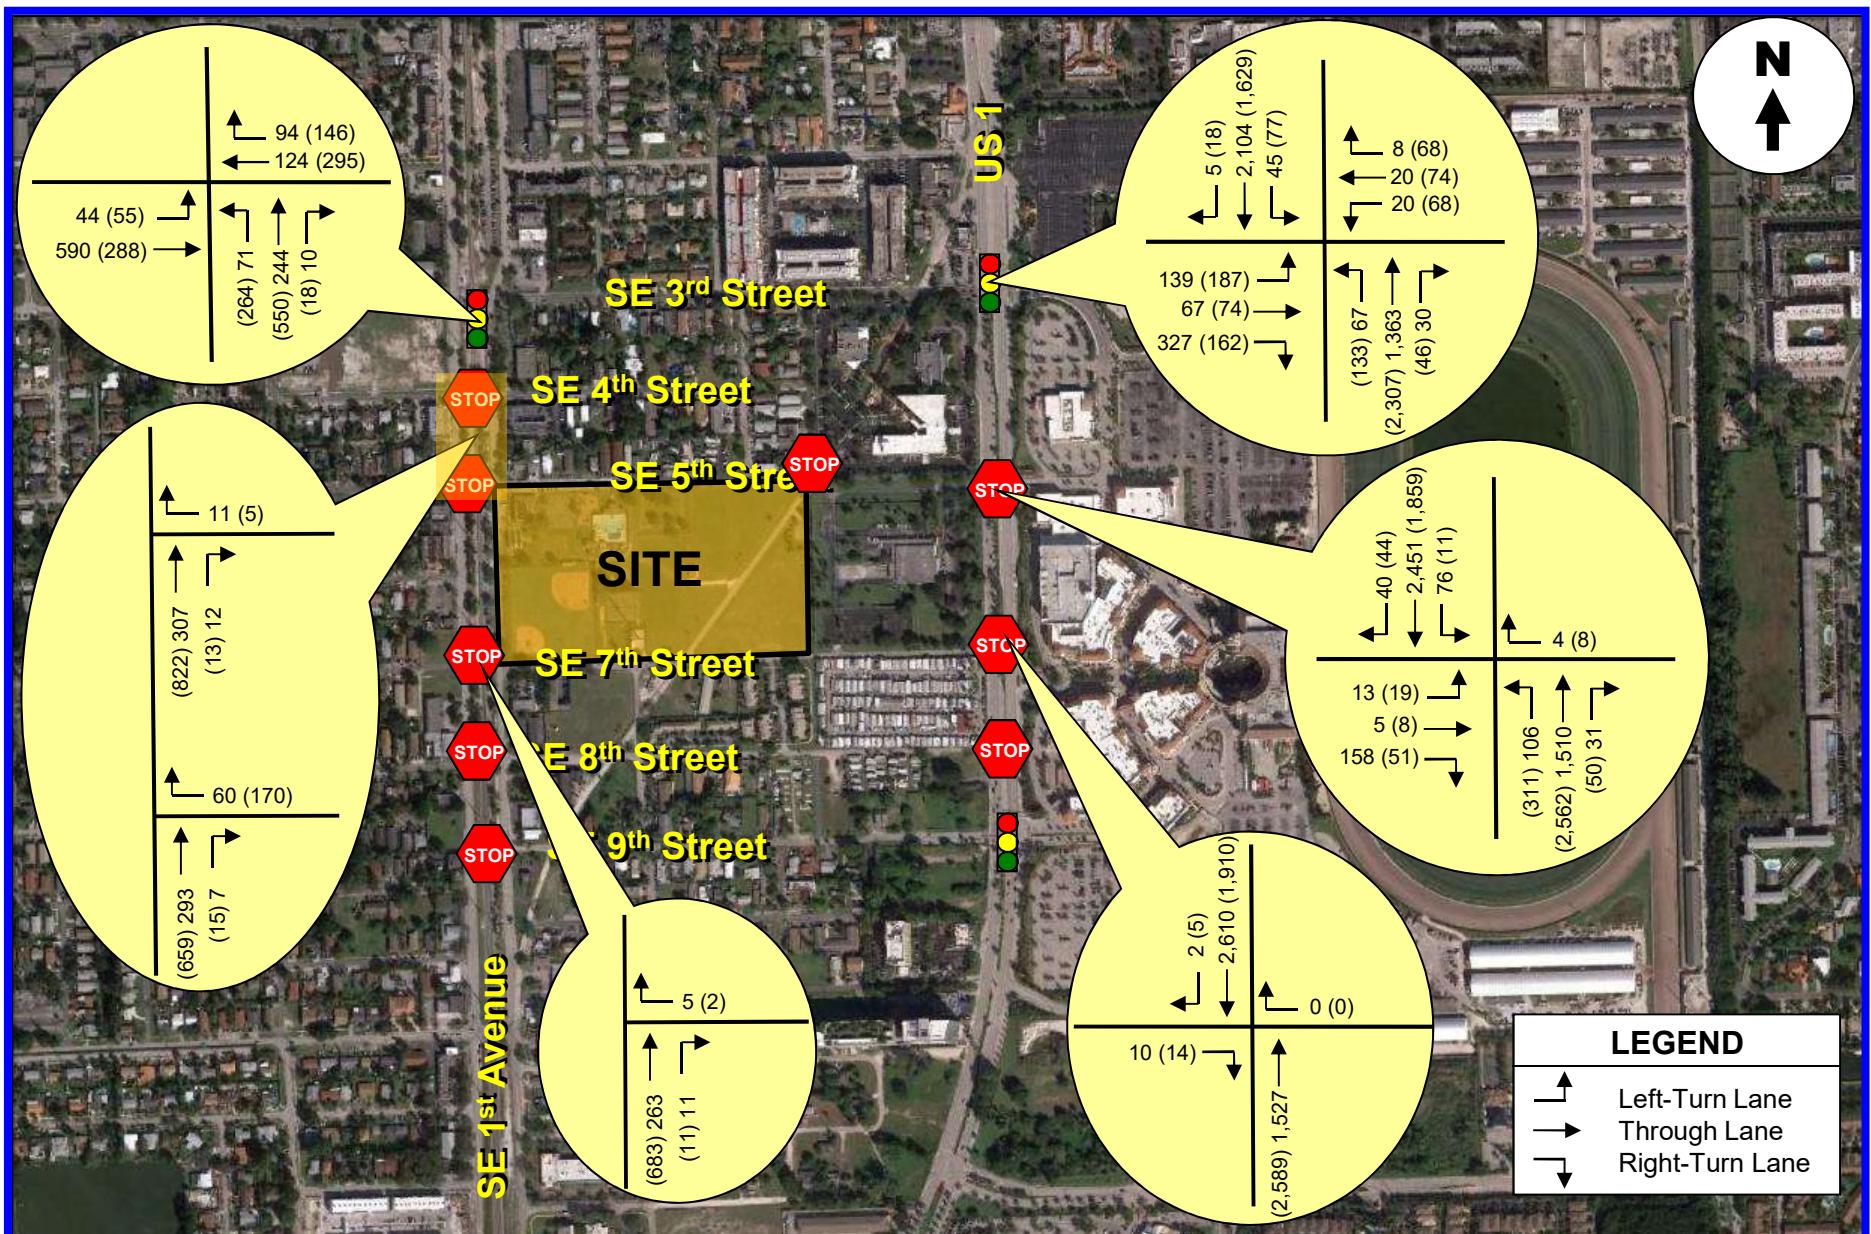

Traf Tech Engineering, Inc., in association with Traffic Survey Specialists, Inc., collected traffic data at the following locations:

1. US 1 and SE 3rd Street
2. US 1 and SE 5th Street
3. US 1 and SE 7th Street
4. US 1 and SE 8th Street
5. US 1 and SE 9th Street
6. SE 1st Avenue and SE 3rd Street
7. SE 1st Avenue and SE 4th Street
8. SE 1st Avenue and SE 5th Street
9. SE 1st Avenue and SE 7th Street
10. SE 1st Avenue and SE 8th Street
11. SE 1st Avenue and SE 9th Street
12. SE 4th Avenue and SE 5th Street

The intersection turning movement counts performed by Traffic Survey Specialists, Inc., were collected on Thursday, October 20, 2016 during the AM and PM peak periods (7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM, respectively).

Figures 3A and 3B summarize the results of the intersection turning movement counts undertaken during the weekday peak hours. Appendix B contains the intersection turning movement counts, as collected in the field. The signal timing plans for the signalized intersections were obtained from Broward County Traffic Engineering Division and are also included in Appendix B.

TRIP GENERATION

The trip generation for the project was based on information contained in the Institute of Transportation Engineer's (ITE) *Trip Generation Manual* (9th Edition). According to the subject ITE manual, the most appropriate "land use" categories for the proposed land uses includes: Land Use 411 – City Park and Land Use 495 – Recreational Community Center. Table 1 summarizes the trips associated with the proposed development.

Table 1 Trip Generation Summary Bluesten Park								
Land Use	Size	Daily Trips	AM Peak Hour Trips			PM Peak Hour Trips		
			In	Out	Total	In	Out	Total
City Park	17.2 Acres	33	43	34	77	34	26	60
Recreational Community Center	46,716 S.F.	1,580	63	33	96	63	65	128
Total Trips		1,613	106	67	173	97	91	188

Compiled by: Traf Tech Engineering, Inc. (November 2016).

Source: Institute of Transportation Engineers (ITE) *Trip Generation* (9th Edition).

As indicated in Table 1, the new trips anticipated to be generated by the proposed development consist of approximately 1,613 daily trips, approximately 106 trips during the AM peak hour (106 inbound and 67 outbound) and approximately 188 PM peak hour trips (97 inbound and 91 outbound).

The trip generation rates used to determine the trips associated with the proposed land uses are presented on the following page:

ITE Land Use 411 – City Park

Daily Trips

T = 1.89 (X)

Where T = number of daily trips and X = Acres

AM Peak Hour of Adjacent Street (Typical Morning Rush Hour)

T = 4.50 (X) (56% entering/44% exiting)

Where T = number of daily trips and X = Acres

PM Peak Hour of Adjacent Street (Typical Afternoon Rush Hour)

T = 3.50 (X) (57% entering/43% exiting)

Where T = number of daily trips and X = Acres

ITE Land Use 495 – Recreational Community Center

Daily Trips

T = 33.82 (X)

Where T = number of daily trips and X = 1,000 Square feet gross floor area

AM Peak Hour of Adjacent Street (Typical Afternoon Rush Hour)

T = 2.05 (X) (66% entering/34% exiting)

Where T = number of daily trips and X = 1,000 Square feet gross floor area

PM Peak Hour of Adjacent Street (Typical Afternoon Rush Hour)

T = 2.74 (X) (49% entering/51% exiting)

Where T = number of daily trips and X = 1,000 Square feet gross floor area

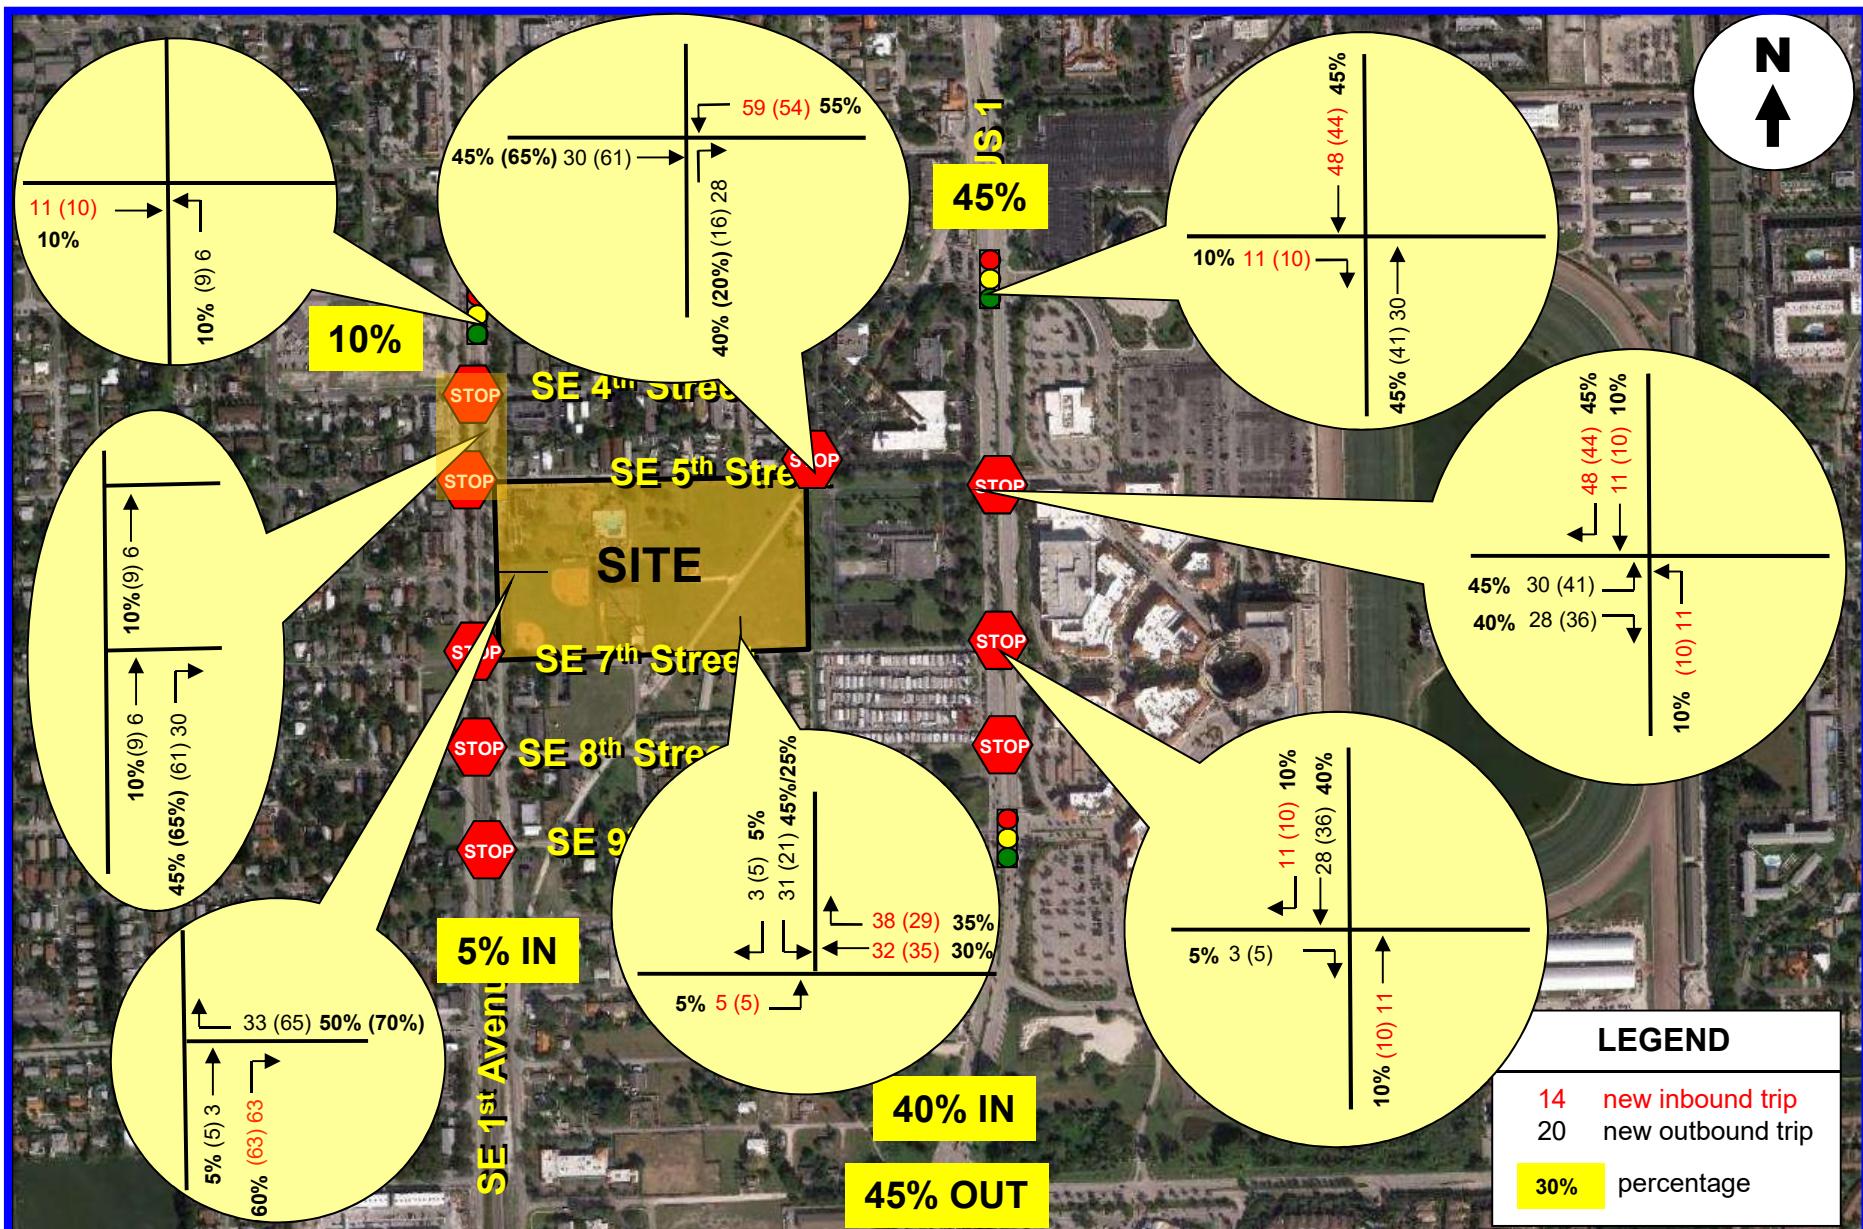

Square feet gross floor area

TRIP DISTRIBUTION AND TRAFFIC ASSIGNMENT

Based on the existing street system surrounding the project and the current traffic volumes on US 1/S. Federal Highway and SE 3rd Street, the following traffic assignment was developed for the subject project:

- 45% to and from the north via US 1/S. Federal Highway
- 40% to and from the south via US 1/S. Federal Highway
- 5% to and from the south via SE 1st Avenue
- 10% to and from the west via SE 3rd Street

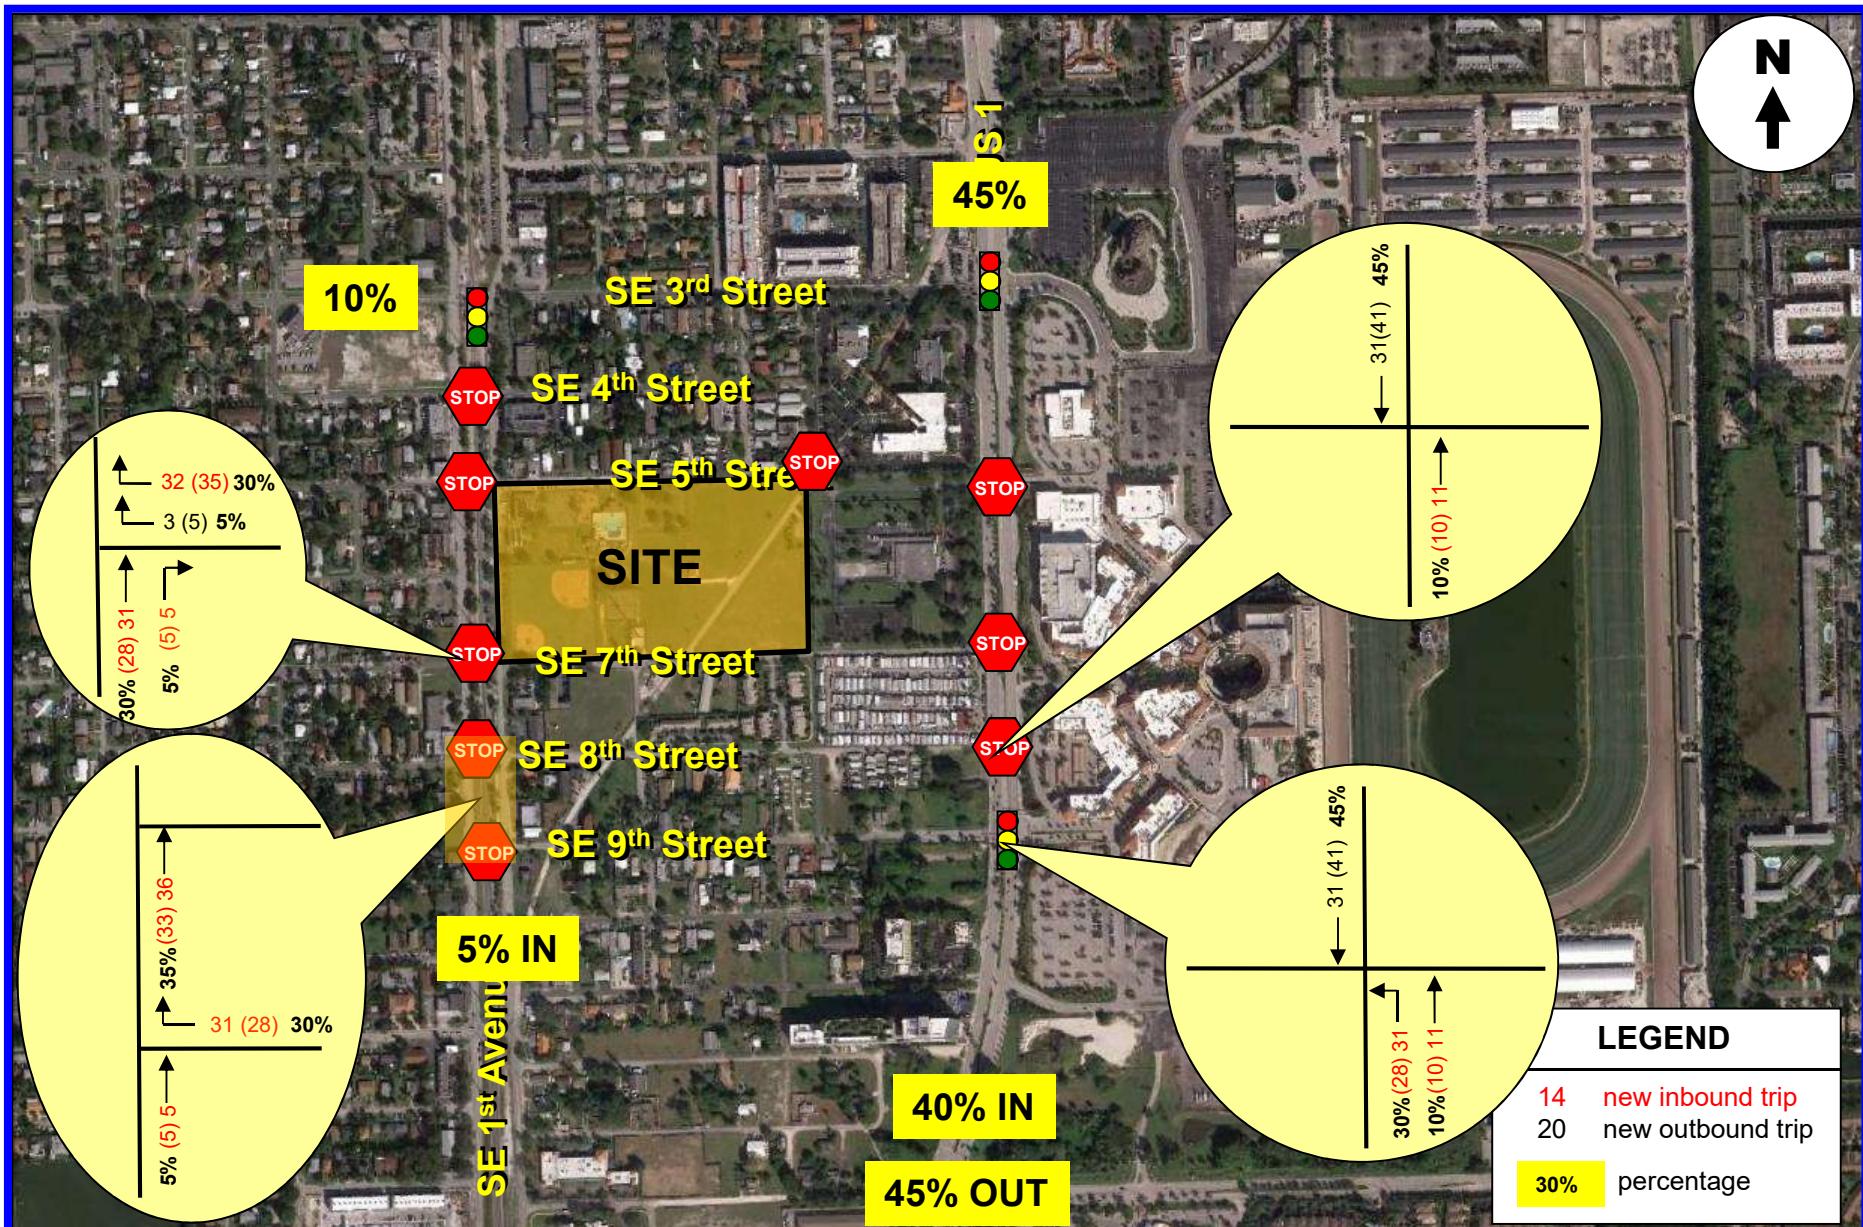

The new peak hour traffic generated by the project was assigned to the nearby transportation network using the traffic assignment documented above. The new project traffic assignment is summarized in Figures 4A and 4B.

TRAFFIC ANALYSIS

This section of the study is divided into three parts. The first part consists of developing the future conditions traffic volumes for the study area. The second part includes level-of-service analyses for existing and future conditions.

Future Conditions Traffic Volumes

Two sets of future traffic volumes were developed. The first set includes project buildout conditions without the proposed project and the second set adds the new trips anticipated to be generated by the project.

In order to develop year 2018 traffic volumes (project anticipated to be built and occupied by the year 2018), without the proposed project, two separate analyses were undertaken. The first analysis converts the existing peak hour traffic counts collected in the field during the month of October to average peak season conditions. Based on FDOT's Peak Season Factor Category report, a factor of 1.19 is required to convert traffic counts collected during the third week of October to average peak season conditions (refer to Appendix C). The second analysis includes a growth factor to project 2016 peak season traffic volumes to the year 2018. For purposes of this traffic study, a 1.0% growth rate was applied to the 2016 traffic counts in order to develop 2018 background traffic conditions.

Additionally, future trips associated with nine nearby approved developments (Beachwalk, 7th Avenue Village, CVS Pharmacy, Diplomat Golf Course & Tennis, Gulfstream Park, Gulfstream Point, Hallandale Artsquare, Hallandale Oasis, and Chateau Square) were added to the background traffic. The future traffic calculations (peak season adjustments, traffic growth, committed developments, and the traffic associated with the proposed development) for the study intersections are contained in Appendix D in tabular format.

The new trips generated by the project (refer to Figures 4A and 4B) were added to the 2016 background traffic in order to develop total traffic conditions. The future traffic projections for the study intersections (peak season adjustments, traffic growth rates, committed developments and project traffic) are presented in tabular format in Appendix D. Figures 5 and 6 present the year 2018 future traffic volumes for the study area.

Figure 5 includes background traffic only (without the proposed project) and Figure 6 includes the additional traffic anticipated to be generated by the proposed project.

Level of Service Analyses

Intersection capacity/level of service analyses were conducted for the study intersections. The analyses were undertaken following the capacity/level of service procedures outlined in the Highway Capacity Manual (HCM) using the SYNCHRO software. The results of the capacity analyses are summarized in Table 2.

As indicated in Table 2, all intersections are currently operating adequately and will continue to operate at acceptable level of service in the year 2018 with the proposed project in place, except for five intersections. The exceptions are US 1 and SE 3rd Street, US 1 and SE 5th Street, US 1 and SE 7th Street, US 1 and SE 8th Street, and US 1 and 9th Street. Note that the deficient level of service at these intersections is mostly due to additional trips generated by committed developments in the area. Appendix E contains the results of the SYNCHRO analyses.

The access driveways off of SE 1st Avenue and SE 7th Street are projected to operate at level of service “A” and “B” as a stop-control intersection during the AM and PM peak hours. No turn lanes are required at the access driveways.

Link Analysis

Link analyses were undertaken within the study using the Generalized Service Volume Tables in the FDOT 2013 Quality and LOS Handbook. The roadway segment evaluation is presented in Tables 3 and 4. As indicated in the tables, all major roadway segments near the project are projected to operate at acceptable levels of services.

CONCLUSIONS

The redevelopment of Bluesten Park will consist of a city park and a recreational community center. The park is located on the east side of SE 1st Avenue between SE 5th Street on the north and SE 7th Street on the south in the City of Hallandale Beach in Broward County, Florida. The study addresses trip generation and the traffic impacts created by the proposed project on the nearby transportation network.

The Bluesten Park site will be re-developed with the following land uses and intensities:

- City Park of 17.2 Acres
- Community Center of 46,716 Square feet

Access to the site will be provided via a driveway off of SE 1st Avenue and a driveway off of SE 7th Street. The conclusions of the traffic study are presented below:

- The new trips anticipated to be generated by the proposed development consist of approximately 1,613 daily trips, approximately 106 trips during the AM peak hour (106 inbound and 67 outbound) and approximately 188 PM peak hour trips (97 inbound and 91 outbound).
- All intersections are currently operating adequately and will continue to operate at acceptable level of service in the year 2018 with the proposed project in place, except for five intersections. The exceptions are US 1 and SE 3rd Street, US 1 and SE 5th Street, US 1 and SE 7th Street, US 1 and SE 8th Street, and US 1 and 9th Street. Note that the deficient level of service at these intersections is mostly due to additional trips generated by committed developments in the area.
- The access driveways off of SE 1st Avenue and SE 7th Street are projected to operate at level of service “A” and “B” as a stop-control intersection during the AM and PM peak hours. No turn lanes are required at the access driveways.

-
- Results of a link analyses indicated that all major roadway segments near the project are projected to operate at acceptable levels of services.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
- m Volume for 95th percentile queue is metered by upstream signal.
